

If you are willing to tell me what to listen, then I will send you the bill for XM radio going forward. If you don't like what services are provided by XM, then you should start your own satellite radio to compete. Don't go and screw something good for the people that subscribe and pay for this service and make the changes you think will benefit other providers. I am in the business where if the service you provide is not good, you look to improve or make necessary changes to your services that are provided so that you are not threatned by the competitor. Don't go cryng to daddy when you know you have been beat hands down and hope they will help you win by asking them to make changes so the competitor can't offer these great services or benefits to the consumer who pay for these services. I don't respectfully urge, I tell you to reject NAB"S PETITION 04-160!!!
